

DRIVER P **DRIVER P Mineral**

DRIVER P and DRIVER P MINERAL are plastomeric waterproofing membranes of good quality suitable for multilayer systems.

Guaranteed Quality UNI EN ISO 9001:2008 and **UNI EN ISO 14001:2004**

Product in compliance with European Standards

Polyglass is a member of Green Building Council

Bituminous membrane

All year membranes

Lateral and endlap sealing strips

Easily flamed non-stick polyethylene film

Manufacturers of **Polymer Membranes**

TECHNICAL DESCRIPTION

DRIVER P and **DRIVER P MINERAL** are plastomeric waterproofing membranes with good quality, made of a distilled bitumen-based compound modified with POLYPROPYLENE and continuous staple non-woven polyester fabric reinforced and stabilized by longitudinal glass-threads. The reinforcement fabric offers good mechanical characteristics and good elongation at break. The compound ensures remarkable characteristics of low temperature flexibility. The sophisticated technology with which these membranes is made guarantees the product's quality.

DRIVER P and **DRIVER P MINERAL** are versatile membranes with good mechanical strength and dimensional stability, two characteristics that make it particularly useful in multi-layer waterproofing.

APPLICATION: INSTRUCTIONS AND RECOMMENDATIONS

DRIVER P can be provided with its upperside covered with a talc, sand, or a non woven polypropylene fabric. Its underside is protected and faced with POLYFLAM CONTINUED, the special non-stick polyethylene film to be flamed during laying. In the MINERAL version, the upperside is protected by an even layer of coloured or natural mineral slate chips and features (patented) lateral and endlap sealing strip for easy overlapping. Support surfaces must be dry, clean, and sufficiently smooth and level. Application is made by light flaming with propane gas. Laying is quick and easy. We recommend slightly heating the roll of membrane prior to laying in winter.

Talc

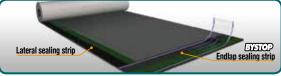

Sand

A non woven polypropylene fabric

STOCKING

Keep the products packed in the carton box in a dry place, away from direct sunlight. Do not place the pallets, one on top of another and the rolls must always be stocked in a vertical position. The contact with solvents and organic liquids may damage the product. Avoid application if the temperature is excessively low or high, avoid stamping (shoes with crampons, small objects or sharp edges). For further information contact Polyglass SpA Technical Office.

Keep out of direct sunlight

Avoid stocking pallets without evenly distributing the load

Keep the rolls standing

Absolutely avoid puncturing the product

DETAILS

SPECIAL ROOFS

- 1 Treat the area to be waterproofed with bituminous primer (POLYPRIMER HP 45 Professional).
- 2 Position the "Bordangolo" near the horizontal-vertical joint.
- 3 Completely strip away the product identification tape.
- 4 In the colder months, we recommend heating up the roll of membrane before applying it.
- 5 Position and apply the sheet by flaming its bottom surface.
- 6 Pull the sheet up to a certain height against vertical surfaces.
- 7 Apply the second sheet with adequate overlapping.
- 8) Lay the second layer by overlapping. Do not cross the sheets.
- 9 Roll the overlapping areas using the special pressing roller.
- Example of internal corner.
- Example of external corner.
- Example of vent pipe.
